

EnduraMetal™ Roofing System

An EnduraMetal™ Roofing System is one of the most important investments you'll make. It will protect and prevent leaks, rust and additional roof repairs while reducing your energy costs and providing a more comfortable environment. Its unparalleled high-quality performance makes EnduraMetal™ the leading choice for existing metal roofing.

Protects Against Rust

EnduraMetal™ helps control corrosion and inhibit further material deterioration while stopping existing rust and preventing additional metal oxidation, even in the most extreme circumstances.

Protects Against Leaks

EnduraMetal™ is a completely seamless roofing system that seals existing seams, fasteners and penetrations, while providing a monolithic and comprehensive, worry-free solution.

Reduces Energy Costs

With superior reflectivity, EnduraMetal™ minimizes cooling loads and reduces energy costs.

Environmentally Friendly

By eliminating tear off, environmental impact is reduced with little to no material disposal at landfills. Additionally EnduraMetal™ maximizes energy and provides a cost savings, further reducing the environmental impact on natural resources while meeting Energy Star® guidelines.

Sustainable

Almost maintenance free, EnduraMetal™ is an easy-to-care-for durable roofing system that can be maintained for the life of your building. Simple and convenient periodic recoating will extend the life of the roof multiple times.

Unmatched Adaptability

Lightweight and extremely adaptable, EnduraMetal™ can be applied to many roof configurations.

The Unmatched Premier EnduraMetal™ Process

The EnduraMetal™ System offers premium, top quality materials that have demonstrated exceptional, extended performance.

EnduraMetal™
Premier Roofing System

Every roofing project is different, so we customize our roofing systems to meet and exceed your specifications and expectations. With on-site, specially trained Tier One Applicators, you can be assured every step of the process will be performed with excellent proficiency, delivering an unmatched, premier roofing system.

EnduraMetal™ offers flexible, long lasting protection for low and high sloped roofs even in the most adverse conditions. This comprehensive roofing system provides a superior roof for new construction as well as existing structures, as the application process addresses each weakness in the existing roof and is ideal for any application over prefabricated metal roof panels. The EnduraMetal™ process involves four distinct steps:

Prepare Surface – All surfaces are cleaned and debris is removed including loose dirt, chalking and rust. Primers may be used depending on the condition of the roof.

Seal Seams – With a seamless, water-tight application, this sealer keeps the elements from your roof while providing a flexible layer able to expand and contract with variable temperatures and weather conditions.

Apply Basecoat – An extremely flexible elastomeric basecoat is applied to ensure proper adhesion for the topcoat and uniform coating thickness and control.

Apply Topcoat – Finally, an elastomeric topcoat provides UV protections, durable weatherproofing and a highly reflective surface.

Once installed, the EnduraMetal™ Roofing System provides a seamless, energy efficient, economical and weather resistant solution.
