EnduraPlus™

EnduraPlus™ Roofing System is the best option for lightweight roof construction. With high structural integrity, seamless spray-in-place rigid polyurethane foam, and an integrated layer of protective elastomeric coating, EnduraPlus™ can provide a durable, lightweight, energy efficient, and weather resistant solution for years to come.

Durable And Lightweight

This proven premier roofing system incorporates high compressive strength with lightweight, rigid polyurethane spray foam to improve overall structural integrity and superior strength. The spray foam and coating system weighs less than a pound per square foot, making it an excellent choice for a variety of roofing substrates.

Protective Seamless Cover

Our advanced spray polyurethane foam is self-flashing and sprayed in place, so there are no seams, channels, complex flashings or overlapping edges for water to seep through. It provides a tight, weatherproof fit.

Cost Effective

EnduraPlus™ is a cost-effective solution to both install and maintain. Our premium coatings and advanced spray polyurethane foam may not require a tear-off of an existing roof prior to re-roofing, thus saving you money and installation time.

Reduces Energy Costs

Advanced closed cell spray polyurethane foam is specially formulated to provide unmatched insulation that translates into dramatically reduced energy costs for you.

Advanced, Breathable Spray Foam

While closed cell spray polyurethane foam is impervious to liquid water, water vapor can diffuse through the foam. Spray foam thickness can be adjusted on-site to improve water drainage while eliminating the detrimental effects of standing water.

Environmentally Friendly

By maximizing energy and cost savings, EnduraPlus™ reduces the environmental impact and meets Energy Star® guidelines. In addition, since no tear off is required, there's no landfill waste and fees.

Sustainable

Almost maintenance free, EnduraPlus™ is easy to care for and virtually trouble-free, allowing the roofing system to last a lifetime at a minimal cost.

Unmatched Adaptability

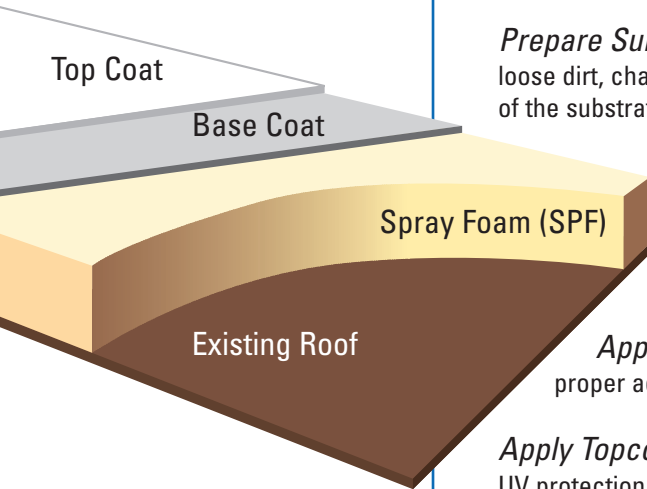

Lightweight and extremely adaptable, EnduraPlus™ conforms to complex roofing details that are difficult to flash with other roofing systems. It's self-adhering and doesn't require screws and fasteners to penetrate the roof deck, and it can be applied in sections, never requiring exposure of open roof decks.

The Unmatched EnduraPlus™ Process

The EnduraPlus™ System offers high quality materials that have demonstrated exceptional, extended performance.

EnduraPlus™
Premier Roofing System

Every roofing project is different, so we customize our roofing systems to meet and exceed your specifications and expectations. With on-site specially trained, qualified Tier One Applicators, you can be assured every step in the process will be performed with excellent proficiency, delivering an unmatched, premier roofing system.

EnduraPlus™ provides long lasting protection even in the most adverse conditions for all types of roofs. The EnduraPlus™ process has four distinct steps:

Prepare Surface – All surfaces are cleaned and debris is removed including loose dirt, chalking and rust. Primers may be required depending on the condition of the substrate.

Apply Foam – With a seamless, water-tight application, advanced closed cell spray polyurethane foam is applied. This layer keeps the elements from your roof while providing a flexible fit able to expand and contract with variable temperatures and weather conditions.

Apply Basecoat – A flexible elastomeric basecoat is applied to ensure proper adhesion for the topcoat and uniform coating thickness and control.

Apply Topcoat – Finally, an elastomeric topcoat provides UV protection, durable weatherproofing, and a highly reflective surface.

Once installed, the EnduraPlus™ Roofing System provides a seamless, energy efficient, economical, and weather resistant solution.
